

Git & GitHub — Quick Guide

Project: Competitive Programming Journey

Local Folder: D:\Competitive-Programming

GitHub Repository: competitive-programming-journey

1. Install Git

Download and install **Git for Windows** using the default settings.

Check installation:

```
git --version
```

2. Configure Git — Do Once

```
git config --global user.name "Nusrat Tasmin Bushra"
```

```
git config --global user.email "bushra04webdev@gmail.com"
```

Check:

```
git config --global --list
```

3. Create & Initialize Project — Do Once

```
mkdir D:\Competitive-Programming
```

```
cd D:\Competitive-Programming
```

```
git init
```

4. First Commit

After creating your `README.md` and other files:

```
git add .  
git commit -m "Initial commit"  
git branch -M main
```

5. Connect GitHub — Do Once

```
git remote add origin https://github.com/FBushra-git/competitive-programming-journey.git
```

Check:

```
git remote -v
```

6. First Push — Do Once

```
git push -u origin main
```

After this, your project is connected to GitHub.

7. Daily Workflow

Whenever you add new CP solutions:

```
cd D:\Competitive-Programming  
git status  
git add .  
git commit -m "Add array practice"  
git push
```

Change the commit message according to what you added.

Examples:

```
git commit -m "Add C++ basics"  
git commit -m "Add STL practice"  
git commit -m "Add sorting problems"  
git commit -m "Add Codeforces solutions"
```

8. Useful Commands

Check changes:

```
git status
```

See commit history:

```
git log --oneline
```

Get changes from GitHub:

```
git pull
```

Check GitHub connection:

```
git remote -v
```

Remember

First setup:

```
Install → Configure → git init → git add → commit → connect GitHub →  
push
```

Everyday:

```
git add . → git commit → git push
```
